

# CLIENT DATABASE

## DATA PROFILE, VALIDATION & QUALITY REPORT

Scope: Client SQL Server databases only

Databases: **AppMasterDB** and **AppMasterEngDB**

Assessment period: October 2026 (data captured 2026-10-06 10:42:14 server time, UTC+4)

| Item                    | Value                                                                      |
|-------------------------|----------------------------------------------------------------------------|
| SQL Server              | SAPROUTER (10.100.137.11:1433)                                             |
| Version                 | SQL Server 2022 RTM (16.0.1000.6) - Standard Edition (64-bit)              |
| Databases profiled      | AppMasterDB, AppMasterEngDB                                                |
| Tables profiled         | 146 (140 + 6)                                                              |
| Total rows              | 80,025,429                                                                 |
| Total table size (used) | 217.6 GB                                                                   |
| Access mode             | Read-only (SELECT / catalog views / DMVs). No data or schema was modified. |

This document profiles the actual client source database environment: inventory, table structure, keys and implicit mappings, data volume, change behaviour, daily activity, data quality and operational health.

| <b>Appendix D - CDC Inventory</b>                                                   | <b>130</b> |

|                                                    |     |
|----------------------------------------------------|-----|
| Appendix E - Timestamp Inventory                   | 135 |
| Appendix F - Daily INSERT/UPDATE/DELETE Statistics | 138 |
| Appendix G - Data Quality Results                  | 142 |
| Appendix H - Data Anomaly Register                 | 197 |
| Appendix I - Implicit Mapping Evidence             | 229 |

## How this profile was produced

- All checks were executed with a dedicated read-only login using **SELECT statements, catalog views and DMVs only**, with READ UNCOMMITTED isolation and NOLOCK hints so that no locks were held against the production workload. No INSERT/UPDATE/DELETE, DDL, DBCC or job execution was performed.
- Every one of the **146 tables** was profiled. All tables were fully scanned except **AppMasterDB.dbo.ActivityTaskPlan** (75,215,700 rows, 213.8 GB): its column-level NULL/format/duplicate figures are from a 0.1% page sample (TABLESAMPLE, repeatable) and its distributions come from SQL Server statistics; its row count, size, indexes and CDC activity are exact.
- Daily INSERT/UPDATE/DELETE counts come from the CDC change tables. CDC retention on this server starts at **2026-10-03 01:56:25**; for earlier days (1-2 October) and for non-CDC tables, activity is derived from timestamp columns (created/updated/Time\_Stamp) and from cumulative operational statistics since the last service start (2026-09-13 21:35:48).
- Only 2 foreign keys are declared, so table relationships were **discovered** in three ways: (1) JOIN conditions parsed from the 100 views / procedures / functions, (2) columns with the same business-key name across tables, and (3) **value-containment testing** - distinct values of each identifier-like column were compared with every other such column to prove mappings that exist without any primary or foreign key.
- Table names are always shown as **Database.Schema.Table** or with the database stated in the table columns.

# A. Database Understanding

## 1. Client Database Overview

**Purpose:** Introduce the client database environment and provide a high-level summary of the databases, tables, row counts, sizes, recovery models and major characteristics.

| Database       | Tables | Rows       | Table data (used) | Data file | Log file | Recovery | CDC (DB) | CDC tables | Tables with PK |
|----------------|--------|------------|-------------------|-----------|----------|----------|----------|------------|----------------|
| AppMasterDB    | 140    | 77,628,927 | 215.9 GB          | 220.2 GB  | 166.8 GB | FULL     | Enabled  | 127        | 27             |
| AppMasterEngDB | 6      | 2,396,502  | 1.7 GB            | 1.8 GB    | 712.0 MB | FULL     | Disabled | 0          | 0              |
| TOTAL          | 146    | 80,025,429 | 217.6 GB          | 222.0 GB  | 167.5 GB |          |          | 127        | 27             |

### Major characteristics

- AppMasterDB** is the main operational database (140 tables). A single table, **AppMasterDB.dbo.ActivityTaskPlan**, holds 75,215,700 rows (94.0% of all rows) and 213.8 GB (98.2% of all used table space).
- AppMasterEngDB** is a small engineering database (6 tables, 1.7 GB used), without CDC, primary keys or indexes; **AppMasterEngDB.dbo.EngineeringACCDump** holds 2,015,914 rows.
- Table roles (by naming and content): Reference / Master: 35, Staging / Import: 35, Historical / Snapshot: 22, Transactional / Operational: 21, Summary / Reporting: 21, Empty: 12.
- 27 of 146 tables have a primary key; 119 do not. Only 2 foreign keys are declared - most relationships are implicit (see Section 8).
- CDC is enabled on AppMasterDB for 127 of 140 tables; AppMasterEngDB has no CDC.
- Both databases use FULL recovery. AppMasterDB is also marked as published (replication) and has Query Store enabled.

## 2. SQL Server Environment Details

**Purpose:** Document the client SQL Server name, IP, port, edition/version, server type, SQL Server Agent and other relevant source-server details.

| Item                        | Value                                                                                                                        |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------|
| Server name / machine       | SAPROUTER / SAPROUTER (default instance)                                                                                     |
| IP address / TCP port       | 10.100.137.11 / 1433                                                                                                         |
| Product                     | Microsoft SQL Server 2022 (16.x)                                                                                             |
| Version / level / CU        | 16.0.1000.6 / RTM / no CU applied                                                                                            |
| Edition                     | Standard Edition (64-bit)                                                                                                    |
| Operating system            | Windows Server 2016 Standard (Windows 10.0)                                                                                  |
| Server type                 | Virtual machine (HYPERVISOR); not clustered; Always On (HADR) disabled                                                       |
| CPU / memory                | 4 logical CPUs / 20,479 MB physical memory                                                                                   |
| Last service start          | 2026-09-13 21:35:48                                                                                                          |
| Server collation            | SQL_Latin1_General_CP1_CI_AS                                                                                                 |
| Authentication              | Mixed mode (SQL + Windows)                                                                                                   |
| SQL Server service          | Running - startup Automatic                                                                                                  |
| SQL Server Agent            | Running - startup Automatic (Agent XPs = 1)                                                                                  |
| Other services              | SQL Full-text Filter Daemon Launcher (MSSQLSERVER) (Running), SQL Server Launchpad (MSSQLSERVER) (Running)                   |
| max server memory (MB)      | 2,147,483,647 (default - unlimited)                                                                                          |
| MAXDOP / cost threshold     | 4 / 5                                                                                                                        |
| Backup compression default  | Off                                                                                                                          |
| xp_cmdshell                 | Enabled                                                                                                                      |
| Other databases on instance | master, model, msdb, tempdb, distribution, DWConfiguration, DWDiagnostics, DWQueue, ATNM_Dev, SAP_Integration (not in scope) |

**Observations:** the instance runs SQL Server 2022 RTM with no cumulative update; *max server memory* is left at the default (unlimited) on a 20 GB VM; *xp\_cmdshell* is enabled; backup compression is off by default. These are configuration observations only - no change was made.

### 3. Database Inventory

**Purpose:** Provide separate inventory summaries for AppMasterDB and AppMasterEngDB, including table count, total rows, size, recovery model and CDC status.

#### AppMasterDB

| Item                            | Value                                                                                |
|---------------------------------|--------------------------------------------------------------------------------------|
| Tables                          | 140 (with PK: 27, heaps: 112, empty: 12)                                             |
| Total rows                      | 77,628,927                                                                           |
| Table data used / reserved      | 215.9 GB / 216.0 GB                                                                  |
| Data file size / used           | 220.2 GB / 218.2 GB (99.1% used)                                                     |

### 4. Complete Table Inventory

**Purpose:** List every client table with schema, table name, row count, size, primary-key availability, CDC status and relevant timestamp/change columns. The complete list is in Appendix A; this section summarises by role.

| Table role                  | Tables | Rows       | Size     | With PK | With CDC | With change column |
|-----------------------------|--------|------------|----------|---------|----------|--------------------|
| Transactional / Operational | 21     | 76,308,627 | 214.8 GB | 6       | 16       | 15                 |
| Reference / Master          | 35     | 99,872     | 44.4 MB  | 7       | 32       | 4                  |
| Summary / Reporting         | 21     | 123,993    | 73.5 MB  | 3       | 20       | 2                  |
| Staging / Import            | 35     | 3,147,853  | 2.6 GB   | 3       | 29       | 19                 |
| Historical / Snapshot       | 22     | 345,084    | 169.8 MB | 3       | 18       | 4                  |
| Empty                       | 12     | 0          | 16 KB    | 5       | 12       | 9                  |

Role classification is based on table naming and content (e.g. *\_History*, *\_YYYYMMDD* = historical snapshot; *Staging*, *STG*, *CSVImport*, *Dump* = staging/import). Appendix A lists every one of the tables with database, schema, row count, size, PK, CDC and timestamp columns.

## 5. Table Size and Data Volume Analysis

**Purpose:** Identify the largest tables, highest row-count tables, smallest/static tables and how data volume is distributed across the databases.

### 5.1 Top 20 tables by size

| #  | Database       | Table                                     | Rows       | Used size | % of total size | Data vs index      |
|----|----------------|-------------------------------------------|------------|-----------|-----------------|--------------------|
| 1  | AppMasterDB    | dbo.ActivityTaskPlan                      | 75,215,700 | 213.8 GB  | 98.22%          | 178.7 GB / 35.1 GB |
| 2  | AppMasterEngDB | dbo.EngineeringACCDump                    | 2,015,914  | 1.3 GB    | 0.61%           | 1.3 GB / 0 KB      |
| 3  | AppMasterEngDB | dbo.EngineeringTaskPlan                   | 335,223    | 366.6 MB  | 0.16%           | 366.6 MB / 0 KB    |
| 4  | AppMasterDB    | dbo.ActivityTaskPlanProject               | 330,189    | 294.3 MB  | 0.13%           | 230.5 MB / 63.7 MB |
| 5  | AppMasterDB    | dbo.ActivityTaskPlan_JobProgress_Cache    | 117,728    | 262.0 MB  | 0.12%           | 216.8 MB / 45.3 MB |
| 6  | AppMasterDB    | dbo.SAP_DRILLING_SEQUENCE_Latest          | 170,276    | 261.8 MB  | 0.12%           | 55.9 MB / 205.9 MB |
| 7  | AppMasterDB    | dbo.ActivityTaskPlan_JobProgress_Latest   | 122,429    | 243.2 MB  | 0.11%           | 215.7 MB / 27.5 MB |
| 8  | AppMasterDB    | dbo.WMR_STG_WMR_Base                      | 99,372     | 164.2 MB  | 0.07%           | 149.6 MB / 14.6 MB |
| 9  | AppMasterDB    | dbo.task_daily                            | 111,950    | 141.6 MB  | 0.06%           | 141.6 MB / 0 KB    |
| 10 | AppMasterDB    | dbo.WMR                                   | 100,654    | 133.0 MB  | 0.06%           | 133.0 MB / 0 KB    |
| 11 | AppMasterDB    | dbo.Staging_SAP_Drilling_Sequence         | 159,129    | 88.0 MB   | 0.04%           | 88.0 MB / 0 KB     |
| 12 | AppMasterDB    | dbo.TNA_Report_Stage                      | 109,254    | 77.7 MB   | 0.03%           | 77.7 MB / 0 KB     |
| 13 | AppMasterDB    | dbo.Form_Detail_Report1                   | 33,847     | 60.1 MB   | 0.03%           | 60.1 MB / 0 KB     |
| 14 | AppMasterDB    | dbo.WellMonitoringReportOptimizedVersions | 32,339     | 42.2 MB   | 0.02%           | 42.2 MB / 0 KB     |
| 15 | AppMasterDB    | dbo.TaskPlanCSVImport                     | 66,944     | 37.5 MB   | 0.02%           | 37.5 MB / 0 KB     |
| 16 | AppMasterDB    | dbo.TaskPlanCSVImport2                    | 65,167     | 36.4 MB   | 0.02%           | 36.4 MB / 0 KB     |
| 17 | AppMasterDB    | dbo.TaskPlanCSVImport1                    | 63,728     | 35.0 MB   | 0.02%           | 35.0 MB / 0 KB     |
| 18 | AppMasterDB    | dbo.RFI_data                              | 2,016      | 34.1 MB   | 0.02%           | 34.1 MB / 0 KB     |
| 19 | AppMasterEngDB | dbo.Staging_SAP_Drilling_Sequence         | 45,000     | 27.4 MB   | 0.01%           | 27.4 MB / 0 KB     |
| 20 | AppMasterDB    | dbo.taskswithattributes                   | 12,590     | 27.3 MB   | 0.01%           | 27.3 MB / 0 KB     |

### 5.2 Top 20 tables by row count

| #  | Database       | Table                                   | Rows       | % of rows | Used size | Avg bytes/row |
|----|----------------|-----------------------------------------|------------|-----------|-----------|---------------|
| 1  | AppMasterDB    | dbo.ActivityTaskPlan                    | 75,215,700 | 93.99%    | 213.8 GB  | 2,550         |
| 2  | AppMasterEngDB | dbo.EngineeringACCDump                  | 2,015,914  | 2.52%     | 1.3 GB    | 712           |
| 3  | AppMasterEngDB | dbo.EngineeringTaskPlan                 | 335,223    | 0.42%     | 366.6 MB  | 1,147         |
| 4  | AppMasterDB    | dbo.ActivityTaskPlanProject             | 330,189    | 0.41%     | 294.3 MB  | 732           |
| 5  | AppMasterDB    | dbo.SAP_DRILLING_SEQUENCE_Latest        | 170,276    | 0.21%     | 261.8 MB  | 344           |
| 6  | AppMasterDB    | dbo.Staging_SAP_Drilling_Sequence       | 159,129    | 0.20%     | 88.0 MB   | 580           |
| 7  | AppMasterDB    | dbo.ActivityTaskPlan_JobProgress_Latest | 122,429    | 0.15%     | 243.2 MB  | 1,848         |
| 8  | AppMasterDB    | dbo.ActivityTaskPlan_JobProgress_Cache  | 117,728    | 0.15%     | 262.0 MB  | 1,931         |
| 9  | AppMasterDB    | dbo.task_daily                          | 111,950    | 0.14%     | 141.6 MB  | 1,326         |
| 10 | AppMasterDB    | dbo.TNA_Report_Stage                    | 109,254    | 0.14%     | 77.7 MB   | 746           |
| 11 | AppMasterDB    | dbo.WMR                                 | 100,654    | 0.13%     | 133.0 MB  | 1,386         |
| 12 | AppMasterDB    | dbo.WMR_STG_WMR_Base                    | 99,372     | 0.12%     | 164.2 MB  | 1,579         |
| 13 | AppMasterDB    | dbo.WBS_Master_Tracker_                 | 81,846     | 0.10%     | 19.5 MB   | 249           |
| 14 | AppMasterDB    | dbo.TaskPlanCSVImport                   | 66,944     | 0.08%     | 37.5 MB   | 588           |
| 15 | AppMasterDB    | dbo.TaskPlanCSVImport2                  | 65,167     | 0.08%     | 36.4 MB   | 586           |
| 16 | AppMasterDB    | dbo.TaskPlanCSVImport1                  | 63,728     | 0.08%     | 35.0 MB   | 576           |
| 17 | AppMasterDB    | dbo.task_daily_attendance               | 61,592     | 0.08%     | 13.1 MB   | 223           |
| 18 | AppMasterDB    | dbo.Planning_KPIs_TaskPlan_Raw          | 45,907     | 0.06%     | 15.7 MB   | 358           |
| 19 | AppMasterEngDB | dbo.Staging_SAP_Drilling_Sequence       | 45,000     | 0.06%     | 27.4 MB   | 638           |
| 20 | AppMasterDB    | dbo.WMR_STG_TaskPlan_Parsed             | 41,994     | 0.05%     | 15.1 MB   | 299           |

### 5.3 Volume distribution

| Row-count band      | AppMasterDB | AppMasterEngDB | Tables | Rows       | Size     |
|---------------------|-------------|----------------|--------|------------|----------|
| 0 rows              | 12          | 0              | 12     | 0          | 16 KB    |
| 1 - 100             | 28          | 1              | 29     | 942        | 840 KB   |
| 101 - 1,000         | 35          | 2              | 37     | 21,013     | 6.0 MB   |
| 1,001 - 10,000      | 23          | 0              | 23     | 93,168     | 63.7 MB  |
| 10,001 - 100,000    | 33          | 1              | 34     | 1,121,860  | 655.0 MB |
| 100,001 - 1,000,000 | 8           | 1              | 9      | 1,556,832  | 1.8 GB   |
| > 1,000,000         | 1           | 1              | 2      | 77,231,614 | 215.1 GB |

- The top table (AppMasterDB.dbo.ActivityTaskPlan) alone accounts for 98.2% of used space; the next largest is AppMasterEngDB.dbo.EngineeringACCDump (1.3 GB).

- 78 tables hold 1,000 rows or fewer (small reference, summary or static tables); 12 tables are empty.
- Static/small tables are listed with their activity classification in Section 14.

## 6. Table Structure / Data Dictionary

**Purpose:** Document every column's name, data type, length, precision, scale, nullability, identity/default information and other structural attributes. The full dictionary is Appendix B.

**3,189 columns** across 146 tables (average 21.8 columns per table; widest table: AppMasterDB.dbo.Form\_Detail\_Report1 (198), AppMasterDB.dbo.Form\_Detail\_Report (156), AppMasterDB.dbo.WMR\_STG\_WMR\_Base (136)).

| Data type        | Columns | % of columns |
|------------------|---------|--------------|
| nvarchar         | 2103    | 65.9%        |
| date             | 253     | 7.9%         |
| decimal          | 240     | 7.5%         |
| datetime2        | 147     | 4.6%         |
| int              | 118     | 3.7%         |
| varchar          | 109     | 3.4%         |
| float            | 68      | 2.1%         |
| text             | 42      | 1.3%         |
| bigint           | 33      | 1.0%         |
| time             | 27      | 0.8%         |
| bit              | 21      | 0.7%         |
| datetime         | 13      | 0.4%         |
| smallint         | 6       | 0.2%         |
| tinyint          | 5       | 0.2%         |
| uniqueidentifier | 3       | 0.1%         |
| char             | 1       | 0.0%         |

- Identity columns: 13; computed columns: 2; columns with DEFAULT constraint: 54.
- Nullable columns: 3024 of 3189 (94.8%).
- Large-object columns (MAX types): 152. Many dates, quantities and progress values are stored as text (nvarchar) - see Section 18.

## B. Database Structure

### 7. Primary Key and Uniqueness Profile

**Purpose:** Document tables with and without primary keys, composite keys, unique indexes, duplicate keys and NULL key issues.

27 tables have a primary key (4 composite), 119 have none (112 of which contain data). Unique (non-PK) indexes: 3. Because PK constraints are enforced, duplicate or NULL primary-key values are not possible in PK tables - verified by profiling (distinct count = row count, 0 NULLs).

#### 7.1 Tables with a primary key

| Database    | Table                            | PK columns                                | Clustered | Rows       | PK verified unique / no NULL |
|-------------|----------------------------------|-------------------------------------------|-----------|------------|------------------------------|
| AppMasterDB | dbo.ActivityTaskPlan             | row_id                                    | Yes       | 75,215,700 | Enforced (sampled)           |
| AppMasterDB | dbo.ActivityTaskPlanProject      | row_id                                    | Yes       | 330,189    | Yes                          |
| AppMasterDB | dbo.awsdms_truncation_safeguard  | latchTaskName, latchMachineGUID, LatchKey | Yes       | 18         | Yes                          |
| AppMasterDB | dbo.company_employees            | id                                        | Yes       | 6,247      | Yes                          |
| AppMasterDB | dbo.Employee                     | id                                        | Yes       | 21,205     | Yes                          |
| AppMasterDB | dbo.KPI_Cluster_Metrics          | PeriodTag, KPI_Key, OutCluster            | Yes       | 954        | Yes                          |

#### 7.2 Tables without a primary key - candidate keys and duplicates

For every table without a PK, the profile tested which columns are unique and non-NULL (candidate keys) and how many exact duplicate rows exist (all non-LOB columns compared).

| Database       | Table                                   | Rows      | Single-column candidate key(s) | Duplicate rows | Max copies | Storage   |
|----------------|-----------------------------------------|-----------|--------------------------------|----------------|------------|-----------|
| AppMasterEngDB | dbo.EngineeringACCDump                  | 2,015,914 | None (no single unique column) | 43,827         | 46         | Heap      |
| AppMasterEngDB | dbo.EngineeringTaskPlan                 | 335,223   | None (no single unique column) | 0              | 1          | Heap      |
| AppMasterDB    | dbo.Staging_SAP_Drilling_Sequence       | 159,129   | id                             | 0              | 1          | Heap      |

## 8. Foreign Key and Table Dependency Profile (including implicit mappings)

**Purpose:** Document parent-child relationships, foreign keys, dependency chains and orphan-record validation - including mappings that exist WITHOUT primary/foreign keys.

### 8.1 Declared foreign keys

| Database    | Child table.column                          | Parent table.column                    | On delete / update    | Trusted | Orphans      |
|-------------|---------------------------------------------|----------------------------------------|-----------------------|---------|--------------|
| AppMasterDB | dbo.OrganizationStructure.PlantCode         | dbo.PlantDescription.PlantCode         | NO_ACTION / NO_ACTION | Yes     | 0 (enforced) |
| AppMasterDB | dbo.OrganizationStructure.ProjectDirectorID | dbo.ProjectDirectors.ProjectDirectorID | NO_ACTION / NO_ACTION | Yes     | 0 (enforced) |

Only 2 foreign keys exist (FK\_OrganizationStructure\_Plant, FK\_OrganizationStructure\_ProjectDirector); AppMasterEngDB has none. All other relationships are implicit and are listed below.

### 8.2 Implicit mappings discovered in views / procedures (JOIN logic)

JOIN / WHERE equality conditions between base tables were extracted from 100 programmable objects. These are relationships the application relies on although no FK exists. Coverage is the % of the child's distinct values found in the parent (data-verified where both columns were profiled).

| Column A                                                        | Column B                                                         | Used in (views / procedures)                                                                                             | Data verification                                   |

### 8.3 Implicit mappings proven by data values (no PK / FK required)

Each identifier-like column's distinct values were compared with every other identifier-like column in both databases. A mapping is listed when at least 80% of the child column's distinct values exist in the parent column and the column names indicate the same business key. **Parent unique = Yes** means the parent column behaves like a key (each value once) even though it may not be a declared primary key. Orphan values are child values with no match in the parent - the orphan-record validation for implicit relationships.

| Child (DB.table.column)                           | Parent / reference (DB.table.column)                      | Child distinct | Matched | Coverage | Parent unique | Orphan values | Orphan examples                                          |
|---------------------------------------------------|-----------------------------------------------------------|----------------|---------|----------|---------------|---------------|----------------------------------------------------------|

## 8.4 Shared business-key families

Columns that carry the same business key across many tables (connected by verified mappings). These are the main join keys of the data model, e.g. Well ID, project ID, crew code.

**Family 1 (20 columns, key ~ 'wellid'):** AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History3.Well\_ID [8,371 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE.Well\_ID [6,159 values, unique]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History.Well\_ID [8,708 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260903\_134111.Well\_ID [8,585 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260910\_140632.Well\_ID [8,597 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260917\_150708.Well\_ID [8,597 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260921\_100749.Well\_ID [8,624 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260922\_141850.Well\_ID [8,624 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260924\_150606.Well\_ID [8,625 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260928\_113108.Well\_ID [8,625 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20261001\_152443.Well\_ID [8,708 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20261005\_090426.Well\_ID [8,708 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_Latest.Well\_ID [6,224 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_june.Well\_ID [5,813 values]; AppMasterDB.Staging\_CSV\_1.Well\_ID [6,249 values]; AppMasterDB.Staging\_SAP\_Drilling\_Sequence.Well\_ID [6,695 values]; AppMasterDB.WMR\_STG\_SAP\_History\_Dedup.Well\_ID [8,558 values]; AppMasterDB.WMR\_STG\_SAP\_History\_Raw.Well\_ID [8,558 values]; AppMasterEngDB.EngWellPriority\_Amal.Well\_ID [58 values, unique]; AppMasterEngDB.Staging\_SAP\_Drilling\_Sequence.Well\_ID [6,593 values]

**Family 2 (19 columns, key ~ 'stationcode'):** AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History3.Station\_Code [37 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE.Station\_Code [23 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History.Station\_Code [37 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260903\_134111.Station\_Code [37 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260910\_140632.Station\_Code [37 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260917\_150708.Station\_Code [37 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260921\_100749.Station\_Code [37 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260922\_141850.Station\_Code [37 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260924\_150606.Station\_Code [37 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260928\_113108.Station\_Code [37 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20261001\_152443.Station\_Code [37 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20261005\_090426.Station\_Code [37 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_Latest.Station\_Code [26 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_june.Station\_Code [24 values]; AppMasterDB.Staging\_CSV\_1.Station\_Code [23 values]; AppMasterDB.Staging\_SAP\_Drilling\_Sequence.Station\_Code [37 values]; AppMasterDB.WMR\_STG\_SAP\_Extra\_Filtered.Station\_Code\_u [5 values]; AppMasterDB.WMR\_STG\_SAP\_History\_Raw.Station\_Code\_u [37 values]; AppMasterEngDB.Staging\_SAP\_Drilling\_Sequence.Station\_Code [36 values]

**Family 3 (18 columns, key ~ 'workcenter'):** AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History3.Work\_Center [82 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE.Work\_Center [69 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History.Work\_Center [103 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260903\_134111.Work\_Center [97 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260910\_140632.Work\_Center [99 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260917\_150708.Work\_Center [99 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260921\_100749.Work\_Center [103 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260922\_141850.Work\_Center [103 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260924\_150606.Work\_Center [103 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20260928\_113108.Work\_Center [103 values]; AppMasterDB.SAP\_DRILLING\_SEQUENCE\_History\_20261001\_152443.Work\_Center [103 values];

## 8.5 Dependency chains (reference table -> dependent tables)

Built from the declared FKs, the code-level joins and the verified mappings: for each reference column that is unique (a natural key even without PK), the tables whose column values are contained in it (coverage >= 80%).

| Reference (parent) column                                   | Dependents | Dependent table.column (coverage %, source)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

Typical end-to-end chains: **ProjectIDs.ID** -> ActivityTaskPlan / ActivityTaskPlanProject / task\_daily (project\_id) -> reporting views; **Employee.id / Uid** -> crews.Supervisor, company\_employees, CrewEmployee -> productivity views; **CrewType.ID / Code** -> crews.CrewType, OLD\_NEW\_CREW\_MAPPING, ActivityCodesNorms -> ActivityTaskPlan.crew\_type; **SAP\_DRILLING\_SEQUENCE\_Latest.Well\_ID** -> WMR / Well\_Classification / WMR\_\* staging (well\_key, pdo\_key) -> WMR\_V2\_Optimized\_Cache -> WellMonitoringReport views; **PlantDescription.PlantCode** -> OrganizationStructure (declared FK).

**Same-entity copies** (identical key columns in history / dated snapshot / staging copies of the same table - not separate relationships): sap\_drilling\_sequence.Station\_Code (210 copy pairs); sap\_drilling\_sequence.Well\_ID (210 copy pairs); sap\_drilling\_sequence.Work\_Center (210 copy pairs); sap\_drilling\_sequence.Station Code (30 copy pairs); sap\_drilling\_sequence.Well ID (30 copy pairs); taskplancsvimport.crew\_uid (6 copy pairs); taskplancsvimport.code (6 copy pairs); taskplancsvimport.parent (6 copy pairs); taskplancsvimport.schedule\_id (6 copy pairs); taskplancsvimport.project\_id (6 copy pairs).

## 8.6 Well ID cross-check (business key without PK/FK)

Well ID is the most widely used business key (it appears under several names: Well\_ID, well\_id, Wellid, pdo\_well\_id, well\_key, pdo\_key, 'Well ID', 'Well ID / Project Ref'). Each Well ID column was compared with the reference well lists (AppMasterDB.SAP\_DRILLING\_SEQUENCE\_Latest.Well\_ID [6,224 wells], AppMasterDB.Well\_Classification.pdo\_well\_id [809 wells], AppMasterDB.WMR\_Historical\_Well\_Master.pdo\_well\_id [809 wells]). **Raw** = exact match; **Normalized** = trimmed, upper-case, leading zeros removed and composite values like '100-36011' reduced to the well number. A large gap between raw and normalized coverage shows formatting inconsistency; unmatched normalized values are wells not present in the reference lists.

| Database    | Table                               | Column  | Distinct  | Formats                                                                        | Raw match % | Normalized % | Unmatched examples  |

## 9. CDC Profile

**Purpose:** Document CDC status, capture instances, CDC tables, associated keys, net-change support, start LSN and capture-instance information. Complete list: Appendix D.

CDC is enabled on **AppMasterDB** with **127** capture instances (one per tracked table); AppMasterEngDB is not CDC-enabled. Net-change support: 0 instances (only possible for tables with a PK/unique index); 127 instances support all-changes only. Earliest available change data: 2026-10-03 01:56:25 (retention window ~3 days at the time of capture). The CDC capture/cleanup job configuration (msdb.dbo.cdc\_jobs) was not readable with the reporting login.

Capture instances with the largest change tables:

## 10. Tables Without CDC

**Purpose:** Identify tables without CDC and document their available timestamp, batch or other change-identification mechanisms.

| Database       | Table                                             | Rows      | PK  | Timestamp / change columns                                                                                                     | Change identification                |
|----------------|---------------------------------------------------|-----------|-----|--------------------------------------------------------------------------------------------------------------------------------|--------------------------------------|
| AppMasterDB    | dbo.ActivityTaskPlan_JobProgress_Cache            | 117,728   | No  | created_at, updated_at, Time_Stamp                                                                                             | Timestamp column                     |
| AppMasterDB    | dbo.awsdsms_truncation_safeguard                  | 18        | Yes | -                                                                                                                              | Identity/PK                          |

## 11. Timestamp and Change-Column Profile

**Purpose:** Document change-related columns, data types, minimum/maximum values, NULL counts, last-24-hour activity and last-7-day activity. Full list: Appendix E.

105 change-related columns were found in 53 tables. 11 of them show activity in the last 7 days. The most active are shown below (sorted by last-7-day rows). Text-typed timestamps were converted with TRY\_CONVERT for min/max (S = sampled table).

| Database       | Table                            | Column           | Type      | Min        | Max        | NULLs   | Last 24h | Last 7d |   |
|----------------|----------------------------------|------------------|-----------|------------|------------|---------|----------|---------|---|
| AppMasterEngDB | dbo.EngineeringACCDump           | Time_Stamp       | datetime2 | 2026-05-13 | 2026-10-06 | 4,952   | 20,000   | 100,000 |   |

## C. Data Behavior

### 12. Daily Data Change Analysis

**Purpose:** Show daily INSERT, UPDATE, DELETE and total-change activity for the assessment period (1-6 October).

**Source:** CDC change tables (exact INSERT / UPDATE / DELETE counts) - available from 2026-10-03 01:56:25. Days before CDC retention are marked 'n/a (CDC)'. A day's figures for the current day are partial (to the time of capture).

| Day                              | INSERT    | UPDATE | DELETE | Total changes | Tables changed |
|----------------------------------|-----------|--------|--------|---------------|----------------|
| 2026-10-01                       | n/a (CDC) | n/a    | n/a    | n/a           | -              |
| 2026-10-02                       | n/a (CDC) | n/a    | n/a    | n/a           | -              |
| 2026-10-03 (partial: from 01:56) | 195,824   | 51,367 | 6,092  | 253,283       | 7              |
| 2026-10-04                       | 141,583   | 60,164 | 1,776  | 203,523       | 5              |
| 2026-10-05                       | 399,914   | 19,136 | 23,738 | 442,788       | 8              |
| 2026-10-06 (partial)             | 138,506   | 9,606  | 888    | 149,000       | 4              |

**Top 25 tables by total CDC changes (all available days):**

| Database    | Table                                     | INS     | UPD    | DEL    | Total   | 10-03   | 10-04   | 10-05   | 10-06   |

ActivityTaskPlan is excluded here because its column profile is sampled; its exact daily volumes are the CDC figures above. Snapshot-style tables (e.g. ActivityTaskPlan Time\_Stamp) receive whole snapshots per load, so per-day counts reflect load volume rather than business edits.

### 13. Daily Row-Count Growth Profile

**Purpose:** Compare table row counts by day and identify net growth, stable tables, declining tables and high-growth tables.

Row counts at the end of each day were reconstructed backwards from the current exact row count using CDC net changes (inserts - deletes) per day. For the first CDC day the count at 2026-10-03 01:56:25 is shown as the baseline.

Classification over the CDC window: **Stable:** 119, **High growth:** 3, **Growing:** 2, **Reloaded (same size):** 2, **Declining:** 1 tables.

| Database    | Table                                     | Baseline   | End 10-03  | End 10-04  | End 10-05  | End 10-06  | Net      | Class       |
|-------------|-------------------------------------------|------------|------------|------------|------------|------------|----------|-------------|
| AppMasterDB | dbo.ActivityTaskPlan                      | 74,453,618 | 74,624,193 | 74,745,769 | 75,096,313 | 75,215,700 | +762,082 | High growth |
| AppMasterDB | dbo.ActivityTaskPlanProject               | 257,331    | 275,542    | 293,753    | 311,970    | 330,189    | +72,858  | High growth |
| AppMasterDB | dbo.SAP_DRILLING_SEQUENCE_Latest          | 163,832    | 163,832    | 163,832    | 170,276    | 170,276    | +6,444   | Growing     |

| AppMasterDB | dbo.task_daily                            | 111,836    | 111,864    | 111,884    | 111,938    | 111,950    | +114     | Growing     |
| AppMasterDB | dbo.WMR_V2_Optimized_Cache                | 918        | 918        | 918        | 917        | 917        | -1       | Declining   |

| Database    | Table                             | Baseline | End 10-03 | End 10-04 | End 10-05 | End 10-06 | Net | Class                |
|-------------|-----------------------------------|----------|-----------|-----------|-----------|-----------|-----|----------------------|
| AppMasterDB | dbo.KPI_Implementation_Data       | 74       | 74        | 74        | 74        | 74        | +0  | Reloaded (same size) |
| AppMasterDB | dbo.SAP_DRILLING_SEQUENCE_History | 21,044   | 21,044    | 21,044    | 21,044    | 21,044    | +0  | Reloaded (same size) |

119 CDC tables had no row changes at all in the window (listed in Section 14 as static). Non-CDC tables: see Section 10/14 (cumulative statistics).

## 14. INSERT / UPDATE / DELETE Behavior Analysis

**Purpose:** Analyse the behaviour of important tables and classify them as insert-heavy, update-heavy, delete-active or relatively stable.

Classification uses cumulative leaf-level operation counters (sys.dm\_db\_index\_operational\_stats) since the last SQL Server start (2026-09-13 21:35:48, ~22 days) for **all** tables including non-CDC ones, combined with the CDC window. Rules: delete-active = deletes >= 20% of all operations; insert-heavy = inserts >= 60%; update-heavy = updates >= 60%; stable = no operations.

| Behaviour class                  | Tables |
|----------------------------------|--------|
| Relatively stable (no writes)    | 108    |
| Insert-heavy                     | 28     |
| Update-heavy                     | 6      |
| Reload pattern (delete + insert) | 2      |
| Delete-active                    | 1      |
| Mixed                            | 1      |

### Most active tables (by total operations since restart):

| Database       | Table                                             | Rows now   | Inserts   | Updates   | Deletes | Del % | Class                            | Last write |
|----------------|---------------------------------------------------|------------|-----------|-----------|---------|-------|----------------------------------|------------|

*Note:* operational counters are kept in memory and can reset when a table's metadata is evicted from cache, so 'no writes' means no writes recorded since the counters were last initialised; CDC (Sections 12-13) is the authoritative source for the tracked tables. *Reload pattern* tables are truncated/deleted and re-inserted by refresh procedures (e.g. `sp_Refresh_*`), so their row counts can be stable while operation counts are very high. The full classification for every table is included in Appendix F.

## D. Data Quality

### 15. Data Quality Validation

**Purpose:** Provide the overall quality checks performed on the client data, including completeness, validity, consistency, uniqueness and required-field checks.

| Dimension             | Checks performed                                                                                                                   | Objects checked | Findings |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------|-----------------|----------|
| Completeness          | NULL / empty / 100%-NULL columns; required-type columns (IDs, codes, names, timestamps)                                            | 3189            | 448      |
| Validity              | Dates/numbers stored as text and convertible; placeholder dates; future dates; negative measures; text placeholders ('NULL','N/A') | 3189            | 368      |
| Consistency           | Leading/trailing spaces in identifiers; same key formatted differently across tables                                               | 3189            | 25       |
| Uniqueness            | PK uniqueness; exact duplicate rows; duplicate business keys                                                                       | 146             | 25       |
| Referential integrity | Declared FKs + implicit mappings: orphan values                                                                                    | 478             | 20       |
| Structure             | Missing PK, heaps, empty tables                                                                                                    | 146             | 124      |
| Performance           | Large heaps, missing-index suggestions                                                                                             | 146             | 8        |

Tables profiled: 146 of 146; columns profiled: 3,189. Findings by severity: **High** 27, **Medium** 293, **Low** 686, **Info** 12. Full register: Section 19 / Appendix H.

### 16. NULL Value Analysis

**Purpose:** Identify NULL values in important columns and report total rows, NULL count, non-NULL count and NULL percentage.

Important columns = identifiers, codes, names and change/timestamp columns. Columns with any NULLs, highest NULL % first (top 60; complete list in Appendix G):

| Database       | Table                                   | Column                                                                           | Type      | Total rows | NULL      | Non-NULL | NULL % | Blank " |
|----------------|-----------------------------------------|----------------------------------------------------------------------------------|-----------|------------|-----------|----------|--------|---------|
| AppMasterEngDB | dbo.EngineeringACCDump                  | Software_version                                                                 | nvarchar  | 2,015,914  | 2,015,914 | 0        | 100.0% | 0       |

In addition, **415** columns (any type) are 100% NULL in tables with data - listed in the anomaly register.

## 17. Duplicate Data Analysis

**Purpose:** Identify duplicate primary keys, business keys, Well IDs and duplicate records, including duplicate frequency.

### 17.1 Primary keys

All 27 primary keys are enforced by SQL Server - no duplicate or NULL PK values exist (verified).

### 17.2 Exact duplicate records

25 tables contain exact duplicate rows (all non-LOB columns identical).

| Database       | Table                              | Rows      | Duplicate (extra) rows | Dup % | Duplicate groups | Max copies | PK |
|----------------|------------------------------------|-----------|------------------------|-------|------------------|------------|----|
| AppMasterDB    | dbo.task_daily_attendance          | 61,592    | 52,385                 | 85.1% | 7,990            | 44         | No |

### 17.3 Well ID duplicates

Duplicate frequency of Well ID columns. In master / lookup tables a Well ID should normally appear once; in activity / history tables repetition is expected (one row per task, day or snapshot).

| Database       | Table                                             | Column             | Role       | Rows    | Duplicated IDs | Rows in dups | Most repeated (count)                          |

## 18. Data Type and Format Validation

**Purpose:** Profile numeric, date/time, character, large-object and other data types and identify structural inconsistencies.

| Type family  | Columns | MAX length | Types                                                                                  |
|--------------|---------|------------|----------------------------------------------------------------------------------------|
| Numeric      | 491     | 0          | decimal (240), int (118), float (68), bigint (33), bit (21), smallint (6), tinyint (5) |
| Date / time  | 440     | 0          | date (253), datetime2 (147), time (27), datetime (13)                                  |
| Character    | 2213    | 152        | nvarchar (2103), varchar (109), char (1)                                               |
| Large object | 42      | 0          | text (42)                                                                              |
| Other        | 3       | 0          | uniqueidentifier (3)                                                                   |

- **119** date-named columns are stored as text (nvarchar/varchar); 39 of them contain values that cannot be converted to a date.
- **61** quantity / hours / progress style columns are stored as text and contain non-numeric values.
- **29** date columns use placeholder dates (1900-01-01 or earlier) instead of NULL.
- The same business key is typed differently across tables (e.g. Well ID as nvarchar(50) / nvarchar(100) / varchar / int) - see the inconsistency table below.

| Database    | Table                                   | Column                                            | Type      | Issue                                                                | Bad values | Non-NULL |

## 19. Data Anomaly Register

**Purpose:** Maintain a structured register of identified data issues with database, table, column, issue, count, severity and remarks. Highest-severity items are shown; the complete register is Appendix H.

| ID     | Severity | Category     | Database       | Table                   | Column                    | Issue                                  | Count     | Remarks                                            |

## 20. Data Quality Rules

**Purpose:** Define repeatable validation rules such as PK uniqueness, required-field completeness, valid dates, valid IDs and referential consistency.

| Rule   | Name                   | Definition                                                                                            | Scope                       | Frequency | Current status                                    |
|--------|------------------------|-------------------------------------------------------------------------------------------------------|-----------------------------|-----------|---------------------------------------------------|
| DQR-01 | PK uniqueness          | COUNT(*) = COUNT(DISTINCT pk) and no NULL in PK columns                                               | All PK tables               | Daily     | Pass (enforced)                                   |
| DQR-02 | Duplicate rows         | No two rows identical across all non-LOB columns                                                      | Tables without PK           | Daily     | 25 tables fail                                    |
| DQR-03 | Required identifiers   | Well_ID / project_id / schedule_id / code / UId not NULL and not ""                                   | Operational + master tables | Daily     | 33 columns fail                                   |
| DQR-04 | Valid dates            | TRY_CONVERT(datetime2, col) succeeds for text dates; no date <= 1900-01-01; no date > today + 2 years | Date / text-date columns    | Daily     | 148 columns flagged                               |
| DQR-05 | Valid numerics         | TRY_CONVERT(float, col) succeeds for qty/hours/progress text columns; no negative quantities          | Measure columns             | Daily     | 61 columns flagged                                |
| DQR-06 | Well ID format         | Trimmed, upper-case, no leading/trailing spaces; consistent type across tables                        | All Well ID columns         | Daily     | See 17.3 / 18                                     |
| DQR-07 | Referential (implicit) | Every child key value exists in its reference table (Section 8.3 mapping list)                        | 478 implicit mappings       | Daily     | 235 with orphans                                  |
| DQR-08 | Referential (declared) | FK trusted and enabled                                                                                | 2 FKs                       | Weekly    | Pass                                              |
| DQR-09 | Freshness              | MAX(change column) within expected load interval (e.g. < 24h for daily-loaded tables)                 | Tables with change column   | Daily     | See Section 11                                    |
| DQR-10 | Volume                 | Row count change vs previous day within tolerance (e.g. +/-20%) or explained by snapshot load         | All tables                  | Daily     | See Section 13                                    |
| DQR-11 | Placeholder values     | No text 'NULL' / 'N/A' / '-' in key or date columns                                                   | Character columns           | Weekly    | 113 columns flagged                               |
| DQR-12 | Snapshot completeness  | Newest ActivityTaskPlan Time_Stamp snapshot row count >= 70% of previous snapshot                     | ActivityTaskPlan            | Per load  | Rule already used in sp_Refresh_WMR_V2_Optimize d |

## E. Database Technical Health

### 21. Index and Performance Profile

**Purpose:** Document index counts, clustered/nonclustered indexes, timestamp indexes and performance-relevant observations for large tables.

- Indexes: 81 (clustered 28, nonclustered 53, other 0); unique 30; filtered 1.
- Heaps (no clustered index): 118 tables, 3.1 GB - including all AppMasterEngDB tables.
- Tables with no index at all: 98.
- Missing-index suggestions recorded by SQL Server: AppMasterDB 60, AppMasterEngDB 7.

#### Indexes on the largest tables

| Database       | Table                                   | Index                                          | Type      | Key columns                                          | Size       | Reads      | Writes  |
|----------------|-----------------------------------------|------------------------------------------------|-----------|------------------------------------------------------|------------|------------|---------|
| AppMasterDB    | dbo.ActivityTaskPlan                    | PK__Activity__6965AB57047D60B4                 | CLUSTE PK | row_id                                               | 178.7 GB   | 11,560,386 | 119,766 |

## Timestamp indexes

| Database    | Table                            | Index                        | Key columns                                    |
|-------------|----------------------------------|------------------------------|------------------------------------------------|
| AppMasterDB | dbo.ActivityTaskPlan             | IX_WMRV2_ATP_TimeStamp       | Time_Stamp                                     |
| AppMasterDB | dbo.SAP_DRILLING_SEQUENCE_Latest | IX_SAP_DRILL_SEQ_Filter_Week | Work_Center, Earl_start_date, week_number      |
| AppMasterDB | dbo.SAP_DRILLING_SEQUENCE_Latest | IX_WMRV2_SAP_Load_Well       | load_timestamp, Well_ID                        |
| AppMasterDB | dbo.SAP_DRILLING_SEQUENCE_Latest | IX_WMRV2_SAP_Well_Week       | Well_ID, week_number DESC, load_timestamp DESC |
| AppMasterDB | dbo.TNA_Report_Stage             | CX_TNA_Report_Stage          | Attendance_Date, Employee_ID                   |

Large tables queried by date (e.g. created\_at / updated\_at on ActivityTaskPlan) have no supporting index - date-range reads on them require scanning the clustered index.

## 22. Historical / Archive / Snapshot Table Profile

**Purpose:** Identify historical, archive, snapshot, version and other non-current data tables.

22 tables hold historical / snapshot / backup copies (345,084 rows, 169.8 MB). Dated copies (e.g. SAP\_DRILLING\_SEQUENCE\_History\_YYYYMMDD\_HHMMSS) are point-in-time snapshots of the SAP drilling sequence. In addition, AppMasterDB.dbo.ActivityTaskPlan itself is snapshot-based: each load appends a full plan identified by Time\_Stamp (see below).

### ActivityTaskPlan snapshot profile

| Item                           | Value                                                                                                                                        |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| Rows / size                    | 75,215,700 rows, 213.8 GB (clustered PK row_id 1 .. 75,215,701)                                                                              |
| Snapshot key                   | Time_Stamp - nvarchar text 'yyyy-mm-dd hh:mi:ss +hhmm' (indexed by IX_WMRV2_ATP_TimeStamp)                                                   |
| First / last snapshot          | 2026-02-15 01:36:30 -0800 / 2026-10-06 00:01:01 +0400                                                                                        |
| Estimated number of snapshots  | ~1,285 (from index statistics histogram)                                                                                                     |
| Rows in latest snapshot        | 119,387                                                                                                                                      |
| Load cadence                   | Snapshots stamped ~00:01 and ~12:01 daily (twice a day), plus ad-hoc loads; CDC shows only INSERTs (no UPDATE/DELETE) - an append-only table |
| CDC inserts per day            | 2026-10-03: 170,575, 2026-10-04: 121,576, 2026-10-05: 350,544, 2026-10-06: 119,387                                                           |
| Timezone offsets in Time_Stamp | 3 distinct offsets in sample (e.g. -0800 and +0400) - text sorting/comparison of Time_Stamp is not chronological across offsets              |
| created_at / updated_at        | NULL in 100.0% of sampled rows - not usable for change detection                                                                             |
| Growth driver                  | Every snapshot re-inserts the full plan (~120k-250k rows); historical snapshots are never deleted                                            |

| Database    | Table                                             | Rows   | Size    | Type               | CDC | Created    | Last write       |

## 23. Staging / Import Table Profile

**Purpose:** Identify staging, import, CSV, raw and processing tables and describe their role in the source database.

| Database       | Table                                   | Rows      | Size     | Role                               | Used by (views / procs)                                                       | Last write       |
|----------------|-----------------------------------------|-----------|----------|------------------------------------|-------------------------------------------------------------------------------|------------------|
| AppMasterDB    | dbo.ActivityMasterCSV                   | 531       | 152 KB   | CSV / file import landing          | Daily_Plan_Report_GB, PH_PROD<br>UCTIVITY_APRIL_REPORT,<br>PH_PRODUCTIVITY_MA | -                |

## 24. Transaction Log Profile

**Purpose:** Document log size, log usage, log reuse wait, log backup behaviour, log growth and autogrowth configuration.

| Database       | Log size | Used  | Reuse wait | VLFs  | Last log backup     | Log since backup | Autogrowth | Max size   |
|----------------|----------|-------|------------|-------|---------------------|------------------|------------|------------|
| AppMasterDB    | 166.8 GB | 25.7% | LOG_BACKUP | 2,673 | 2026-09-14 06:52:35 | 42.8 GB          | 64 MB      | 2,048.0 GB |
| AppMasterEngDB | 712.0 MB | 5.3%  | NOTHING    | 15    | 2026-10-05 10:36:38 | 0.0 GB           | 64 MB      | 2,048.0 GB |

- **AppMasterDB:** FULL recovery, but the last transaction-log backup was on **2026-09-14 06:52:35**. The log cannot be truncated (reuse wait = LOG\_BACKUP) and has grown to 166.8 GB with 2,673 VLFs; 42.8 GB of log has been generated since the last log backup.
- The log is capped at 256 GB (max\_size); if log backups do not resume, the log will keep growing toward that limit and writes would then fail.
- A high VLF count (>1,000) slows database recovery/restore and log reads.
- **AppMasterEngDB:** FULL recovery, log 712.0 MB, 5.3% used; no log backups recorded.
- Autogrowth is a fixed 64 MB increment for both data and log files (not percentage).

## 25. Backup and Recovery Profile

**Purpose:** Document recovery model, full/differential/log backup history, backup frequency and backup sizes.

| Database       | Type | Start               | Finish              | Size     | Compressed | Copy-only | Destination type            |
|----------------|------|---------------------|---------------------|----------|------------|-----------|-----------------------------|
| AppMasterDB    | Full | 2026-08-11 10:45:31 | 2026-08-11 11:13:40 | 185.2 GB | 185.2 GB   | No        | Network share               |

| AppMasterDB    | Full | 2026-10-05 12:36:11 | 2026-10-05 12:41:59 | 217.6 GB | 26.2 GB    | Yes       | URL (remote object storage) |
| AppMasterDB    | Full | 2026-10-05 12:36:11 | 2026-10-05 12:41:59 | 217.6 GB | 26.2 GB    | Yes       | URL (remote object storage) |
| AppMasterDB    | Full | 2026-10-05 12:36:11 | 2026-10-05 12:41:59 | 217.6 GB | 26.2 GB    | Yes       | URL (remote object storage) |

- No differential backups exist. Full backups are irregular (11-Aug, 13/14-Sep, 05-Oct) rather than on a fixed schedule; no SQL Agent backup job history was readable with the reporting login.
- Only one transaction-log backup exists for AppMasterDB (14-Sep). Under FULL recovery this means point-in-time recovery is not possible after 14-Sep and the log keeps growing.
- AppMasterEngDB has two full backups, both on 05-Oct-2026, and no log backups.
- Backup compression is off by default; native full backups of AppMasterDB are ~217-234 GB uncompressed (compressed copy-only backups are ~28 GB, i.e. ~8:1).
- Several backups of AppMasterDB are written to the same file name (APPMasterDB13092026.bak) - risk of overwriting/appending backup sets.

## 26. Database Storage and Growth Profile

**Purpose:** Document data-file size, log-file size, used/free space, historical growth and future growth patterns.

| Database       | File               | Type | Path                                         | Size     | Used     | Free     | Used % | Growth |
|----------------|--------------------|------|----------------------------------------------|----------|----------|----------|--------|--------|
| AppMasterDB    | AppMasterDB        | ROWS | E:\Program Files\DATA\AppMasterDB.mdf        | 220.2 GB | 218.2 GB | 2.0 GB   | 99.1%  | 64 MB  |
| AppMasterDB    | AppMasterDB_log    | LOG  | E:\Program Files\DATA\AppMasterDB_log.ldf    | 166.8 GB | 42.9 GB  | 123.9 GB | 25.7%  | 64 MB  |
| AppMasterEngDB | AppMasterEngDB     | ROWS | E:\Program Files\DATA\AppMasterEngDB.mdf     | 1.8 GB   | 1.7 GB   | 23.9 MB  | 98.7%  | 64 MB  |
| AppMasterEngDB | AppMasterEngDB_log | LOG  | E:\Program Files\DATA\AppMasterEngDB_log.ldf | 712.0 MB | 37.7 MB  | 674.3 MB | 5.3%   | 64 MB  |

**Historical growth (from full-backup sizes):** AppMasterDB grew from 185.2 GB (2026-08-11) to 217.6 GB (2026-10-05): +32.4 GB in 55 days ≈ **0.59 GB/day** (~18 GB/month). The data file is 99.1% full, so it will continue to auto-grow in 64 MB steps. Growth is driven almost entirely by AppMasterDB.dbo.ActivityTaskPlan snapshot loads.

| Database    | Backup date | Full backup size | Change vs previous |
|-------------|-------------|------------------|--------------------|
| AppMasterDB | 2026-08-11  | 185.2 GB         | -                  |
| AppMasterDB | 2026-09-13  | 202.6 GB         | +17.4 GB           |
| AppMasterDB | 2026-09-14  | 202.6 GB         | +8,192 KB          |
| AppMasterDB | 2026-10-05  | 217.6 GB         | +15.0 GB           |

**Projection** at the observed rate: ~271 GB of data in 3 months and ~324 GB in 6 months (data file only, excluding log).

## F. Reporting and Reference

### 27. Daily Data Quality Report

**Purpose:** Provide a recurring daily summary of tables checked, row counts, inserts, updates, deletes, NULL issues, duplicate issues and failed checks.

Daily summary (template populated for the assessment days available). Change counts from CDC (AppMasterDB, 127 tables); quality figures from this profile run (2026-10-06).

| Date       | Tables checked | Total rows | Inserts | Updates | Deletes | NULL issues | Duplicate-row tables | Failed checks (High/Med) |
|------------|----------------|------------|---------|---------|---------|-------------|----------------------|--------------------------|
| 2026-10-01 | 146            | -          | n/a     | n/a     | n/a     | -           | -                    | -                        |
| 2026-10-02 | 146            | -          | n/a     | n/a     | n/a     | -           | -                    | -                        |
| 2026-10-03 | 146            | -          | 195,824 | 51,367  | 6,092   | -           | -                    | -                        |
| 2026-10-04 | 146            | -          | 141,583 | 60,164  | 1,776   | -           | -                    | -                        |
| 2026-10-05 | 146            | -          | 399,914 | 19,136  | 23,738  | -           | -                    | -                        |
| 2026-10-06 | 146            | 80,025,429 | 138,506 | 9,606   | 888     | 448         | 25                   | 320                      |

Recommended daily procedure: run rules DQR-01 ... DQR-12 (Section 20) after the daily loads, store the results with the date, and compare against the previous day.

### 28. Important Client Database Observations

**Purpose:** Summarise the most important source-data findings, including high-volume, high-change, static, duplicate-prone, NULL-prone, historical and staging tables.

- **High-volume:** AppMasterDB.dbo.ActivityTaskPlan (75,215,700); AppMasterEngDB.dbo.EngineeringACCDump (2,015,914); AppMasterEngDB.dbo.EngineeringTaskPlan (335,223); AppMasterDB.dbo.ActivityTaskPlanProject (330,189); AppMasterDB.dbo.SAP\_DRILLING\_SEQUENCE\_Latest (170,276).
- **ActivityTaskPlan is a snapshot store:** rows are appended per load with a Time\_Stamp (2026-02-15 01:36:30 -0800 ... 2026-10-06 00:01:01 +0400); the latest snapshot holds 119,387 rows. The table grows by one full plan per load; reporting procedures pick the latest healthy snapshot.
- **High-change:** AppMasterDB.dbo.ActivityTaskPlan (ins 5,273,272, upd 0, del 0); AppMasterDB.dbo.task\_daily (ins 1,590, upd 2,662,631, del 0); AppMasterDB.dbo.flaf\_po\_peg\_scr\_moc\_document\_data (ins 20, upd 759,880, del 0); AppMasterDB.dbo.ActivityTaskPlan\_JobProgress\_Cache (ins 470,912, upd 0, del 0); AppMasterEngDB.dbo.EngineeringACCDump (ins 440,000, upd 0, del 0).
- **Static:** 96 tables with data had no writes since the last restart (e.g. dbo.2026\_Well\_Delivery\_Scope\_Well\_Type, dbo.ActivityCodesNorms, dbo.ActivityList, dbo.ActivityMasterCSV, dbo.ActivityMasterMapping\_New, dbo.ActivityTaskPlan\_Summary, dbo.ATNM\_Daily\_Summary, dbo.ATNM\_Static\_Summary).
- **Duplicate-prone:** AppMasterDB.dbo.task\_daily\_attendance (52,385 duplicate rows); AppMasterEngDB.dbo.EngineeringACCDump (43,827 duplicate rows); AppMasterDB.dbo.RFI\_data (1,909 duplicate rows); AppMasterDB.dbo.SAP\_DRILLING\_SEQUENCE\_History3 (1,830 duplicate rows); AppMasterDB.dbo.WellMonitoringReportOptimizedVersions (506 duplicate rows).
- **NULL-prone key columns:** AppMasterEngDB.dbo.EngineeringACCDump.Software\_version (100% NULL); AppMasterEngDB.dbo.EngineeringACCDump.IPM\_Well (98% NULL); AppMasterEngDB.dbo.EngineeringACCDump.Actual\_MSV\_MF\_Port\_No (98% NULL); AppMasterEngDB.dbo.EngineeringACCDump.Well\_Type (99% NULL); AppMasterEngDB.dbo.EngineeringACCDump.Rig\_No\_Attribute (98% NULL); AppMasterEngDB.dbo.EngineeringACCDump.Job\_No (99% NULL).
- **Historical:** 22 history/snapshot tables, including 9 dated copies of SAP\_DRILLING\_SEQUENCE\_History.
- **Staging:** 35 staging/import/work tables (2.6 GB), mainly the WMR refresh pipeline (WMR\_STG\_\*) and CSV imports.
- **Implicit data model:** only 2 FKs, but 478 data-verified implicit mappings; Well ID is the dominant cross-table key (Section 8.4).
- **Keys:** 119 of 146 tables lack a primary key and 118 are heaps.
- **Operational risk:** AppMasterDB transaction log not backed up since 14-Sep (171 GB log, LOG\_BACKUP wait); irregular full backups; SQL Server 2022 RTM without cumulative updates.

## 29. Overall Client Data Profile Summary

**Purpose:** One-page management summary of databases, tables, rows, size, CDC, change behaviour, data-quality findings and operational characteristics.

| Item             | Value                                                                                                                                                                          |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Databases        | AppMasterDB (operational, CDC-enabled), AppMasterEngDB (engineering, no CDC)                                                                                                   |
| Server           | SAPROUTER (10.100.137.11), SQL Server 2022 Standard Edition (64-bit)                                                                                                           |
| Tables / columns | 146 tables (140 + 6), 3,189 columns                                                                                                                                            |
| Rows / size      | 80,025,429 rows; 217.6 GB used table space; data files 222.0 GB, log files 167.5 GB                                                                                            |
| Concentration    | ActivityTaskPlan = 94% of rows, 98% of size                                                                                                                                    |
| Keys             | 27 tables with PK, 119 without; 118 heaps; 2 declared FKs; 478 verified implicit mappings                                                                                      |
| CDC              | 127 tables tracked (AppMasterDB); 19 not tracked; retention from 2026-10-03 01:56:25                                                                                           |
| Change behaviour | 1,048,594 CDC changes in the window; classes: Relatively stable (no writes) 108, Insert-heavy 28, Update-heavy 6, Reload pattern (delete + insert) 2, Delete-active 1, Mixed 1 |
| Data quality     | 1018 register entries - Medium 293, Low 686, High 27, Info 12; 25 tables with duplicate rows; 415 fully-NULL columns                                                           |
| Growth           | ≈ 0.59 GB/day (AppMasterDB, from backup history)                                                                                                                               |
| Operations       | FULL recovery on both DBs; log backups not running (AppMasterDB log 171 GB); irregular full backups; SQL Agent running                                                         |

### Top priorities (observations only - no changes were made):

- Resume regular transaction-log backups for AppMasterDB (or review the recovery model) to stop log growth and restore point-in-time recoverability.
- Add primary keys / unique constraints where candidate keys exist (Section 7.2) and remove exact duplicates in operational/master tables.
- Formalise the implicit mappings (Section 8.3) - at least as documented rules (DQR-07), optionally as FKs - and resolve orphan values.
- Store dates and numeric measures in proper data types; standardise Well ID type/format across tables.
- Review retention for ActivityTaskPlan snapshots and dated history copies, which drive almost all storage growth.

## 30. Appendices

**Purpose:** Detailed supporting inventories and technical evidence that would be too large for the main sections.

- Appendix A - Complete Table List
- Appendix B - Complete Column / Data Dictionary
- Appendix C - Primary Key and Index Inventory
- Appendix D - CDC Inventory
- Appendix E - Timestamp Inventory
- Appendix F - Daily INSERT/UPDATE/DELETE Statistics
- Appendix G - Data Quality Results
- Appendix H - Data Anomaly Register
- Appendix I - Implicit Mapping Evidence (all value-containment results)

## Appendix A - Complete Table List

| Database    | Schem<br>a | Table                               | Role          | Rows       | Size     | Cols | PK                                              | CDC | Timestamp / change columns                   | Created    | Last write       |

## Appendix B - Complete Column / Data Dictionary

Per column: type, length (characters for n-types; -1 = MAX), precision/scale, nullability, identity, default, plus profiled NULL count and distinct count (S = sampled table).

## Appendix I - Implicit Mapping Evidence

All value-containment results (child column values found in a parent/reference column), including weaker candidates. Coverage = % of the child's distinct values present in the parent. Name similarity 1.0 = same column name; 0 = different names (value-only evidence). [S] = one side sampled (ActivityTaskPlan).

| Child (DB.table.column)                          | Parent (DB.table.column)                             | Child distinct | Parent distinct | Matched | Coverage | Parent cov. | Parent unique | Name sim. | Orphan values | Orphan rows | Orphan examples                                 |
